General characteristics

- Up to 40A (1000VDC) and 32A (1200VDC)
- Modular construction
- Jumpers for connecting the poles in series supplied as standard with disconnectors GD series...
- Available versions:
 - Direct operating
 - Door coupling version. Use switch disconnector with direct actuator and separately purchase the handle and shaft extension for this version.
- Screw or 35mm DIN rail fixing
- Padlockable in 0 position with no extra accessory.

Operational characteristics

- Rated insulation voltage for GA...D and GD... Ui: 1000V (pollution degree 3)
- Rated insulation voltage for GD... Ui: 1500V (pollution degree 2)
- Rated impulse withstand Uimp: 8kV
- Mechanical life:
 - 100,000 cycles GA040D
 - 10,000 cycles GD...
- Operating temperature: -25°C...+55°C
- Storage temperature: -40°C...+70°C
- Degree of protection: IP20 (only for GA040D).

Certifications and compliance

Certifications obtained: UL Listed for USA and Canada (cULus - File E93602) as Manual Motor Controllers, to UL508/CSA C22.2 n° 14 for GA040D and GAX42040D; EAC for GA...D.

Compliant with standards: IEC/EN/BS 60947-3, IEC/EN/BS 60947-1.

General characteristics

SURGE PROTECTION DEVICES TYPE SG2...

They are available in plug-in cartridge version and they are suitable for installation in secondary boards and in terminal equipment.

They ensure protection against overvoltages conditions.

The protection cartridges are plug-in and can be easily replaced for quick servicing.

SG2... surge arresters are immune to temporary overvoltages (TOV) and block the circulation of the subsequent network current after the intervention.

Operational characteristics

- IEC maximum continuous operating voltage Uc: 275VAC for SG2C... and 300VAC for SG2...
- IEC maximum discharge current Imax (8/20µs): 40kA for SG2C... and 50kA for SG2...
- IEC rated discharge current In (8/20µs): 20kA per pole
- Versions with or without relay output with changeover contact for remote status indication
- IEC degree of protection: IP20.

Certifications and compliance

Certification obtained: EAC.

Compliant with standards: IEC/EN/BS 61643-11.

General characteristics

The surge protection devices type SG2EDG... and SE2DG... with plug-in cartridge for photovoltaic applications are suitable for installation on the direct-current side of a photovoltaic installation and protects against induced overvoltage conditions.

The protection cartridges are plug-in and can be easily replaced for quick servicing.

Operational characteristics

- EN maximum continuous voltage Ucpv: 600VDC, 1100VDC, 1500VDC
- EN short circuit current rating Iscpv: 11kA for SG2EDG... and SE2DG..., 9kA per SA2EDG...

P1MD4PB25	25	4	3	0.505
P1MD4PB50	50	4	3	0.505

General characteristics

The miniature circuit breakers for photovoltaic applications type P1MD... are designed to protect against overloads and short circuits the cables located between the photovoltaic panel strings and the inverter.

In addition to photovoltaic applications, these devices can be used for other DC-1 loads, such as non-inductive or slightly-inductive loads.

Main features include:

- Rated current from 16A to 50A
- IEC breaking capacity I_{cu} 5kA 1000VDC
- Contact status with flag indicator
- Tripping characteristic: curve type B
- Accessories available: auxiliary contacts, shunt trips and undervoltage releases.

Operational characteristics

- Rated insulation voltage U_i: 1000V
- Rated impulse voltage U_{imp}: 4kV
- Mechanical life: 20.000 cycles
- Mounting on 35mm DIN rail (IEC/EN/BS 60715)
- Mounting position: any
- Utilization category: A.

Reference standard

Compliant with standard: IEC/EN/BS 60947-2.

Add-on blocks for miniature circuit breakers

P1X16024	12...24VAC/DC 50/60Hz	1	8	0.070

General characteristics

- Auxiliary and indicator contact width: 9mm/0.35" (0.5 module)
- Undervoltage and shunt trip release width: 18mm/0.71" (1 module)
- Maximum combination: 3 add-on blocks on MCB left side only of which 1 undervoltage or shunt release directly on MCB side and then 2 contacts of which 1 auxiliary contact and 1 indicator contact.

Operational characteristics

- IEC rated impulse voltage U_{imp}: 4kV
- IEC rated operational current in AC: 6A 230V; 3A 400V (auxiliary contacts).

Reference standard

Compliant with standard: IEC/EN/BS 60947-5-1.

PV Cut-Off Switch

Also known as a fireman's switch, it may be required in photovoltaic systems for emergency shutdown of solar panels in case of fire or dangerous functional anomalies. The shutdown must be performed using a switch suitable for load separation, which can be operated by a remote command located in a clearly marked and accessible position.

The command should be provided via appropriate emergency buttons that can activate undervoltage coils or shunt trip release devices of the switch.

Lovato Electric offers P1MD circuit breakers for this application, which cover nominal currents from 16A to 50A for systems up to 1000VDC.

General characteristics

In photovoltaic systems, contactors are used with the function of IS (Interface Switch) between the DC/AC inverter output and the line.

The Italian CEI 0-21 standard, prescribes that contactors used as ISs must have dimensions corresponding to the AC-3 utilisation category.

General characteristics

MOULDED CASE CIRCUIT BREAKERS (MCCBs) are technologically advanced devices with electronic trip units, which can be used in photovoltaic systems with the function of IS (Interface Switch) between the DC/AC inverter output and the line, in alternative to contactors. MCCBs offer a wide current adjustment range, ensuring high precision in tripping and providing the flexibility to set a short tripping delay in the event of a short circuit.

The operating lever is equipped with a trip position, serving as an indicator for openings resulting from faults in the plant. A useful test button facilitates the verification of the plant's signalling system. Additionally, a LED on the MCCB's front signals a high current level that may cause the breaker to trip. A dedicated adjuster allows for the specific setting of tripping current on the 4th pole, which can differ from the three main poles.

Operational characteristic

- IEC rated insulation voltage U_i : 1000V
- IEC rated impulse withstand voltage: 8kV
- IEC rated frequency: 50/60Hz
- IEC breaking capacity: 50kA for sizes 100...250A, 65kA for sizes 400...800A
- Mounting position: Any
- IEC degree of protection: IP20 on front
- Operating temperature: -20°C...+70°C (with derating above 40°C)

Reference standard

Compliant with standard: IEC/EN/BS 60947-2.

Backup device opening

In installations with more than 400kW, the standard specifies there must be a command signal, that releases another backup device, given within 1 second whenever the IS opening fails or malfunctions.

Automatic IS reclosing

Whenever an automatic circuit breaker is used as the IS, the PMVF30 is capable of controlling both the opening (according to the installation conditions indicated in the Italian CEI 0-16 standard) and the auto reclosing. The auto reclosing function includes defining the number of attempts and the time interval between an attempt and the following one as well as generating an alarm if the closing operation does not take place.

This function can be carried out through a programmable output of the PMVF30 (unless it is already used for the standby device operation) or by installing an EXP1003 expansion module.

General characteristics

PMVF30 interface protection system (IP) unit has been developed according to the Italian CEI 0-16 standard prescriptions. It is used when a local generating system is connected in parallel with the medium-voltage utility distribution grid. The controls refer to limits of voltage and frequency monitoring.
In the case when either the voltage or the frequency are out of admissible limits, PMVF30 must step in by de-energising a relay output so that the interface switch (IS) trips.
PMVF30 is equipped with inputs having the following functions:

- IS status feedback
- Interface protection system exclusion
- Local control
- Remote tripping (forced IS opening, independent of voltage and frequency values).

In addition, there are two relay outputs to configure as:

- IS opening
- Programmable (either as factory default for standby device opening or to set up as auto reclosing if the IS is an automatic circuit breaker).

Operational characteristics

- Auxiliary supply voltage:
 - PMVF30: 100...400VAC/110...250VDC
 - PMVF30D048: 12...48VDC
- Voltage inputs (connection via VTs in MV or directly in LV):
 - Primary: up to 150,000V
 - Secondary: 50...500V (for voltage/frequency); 50...150V (for residual voltage measurement)
- Relay outputs 5A 250VAC AC1 / 5A 30VDC
- 4 digital inputs
- 3 current inputs (for optional measuring): Use via CTs with selectable /5A or /1A secondary
- Parameter configuration and remote control (only with communication expansion module) with software **Synergy** and **Xpress**
- Housing: Flush mount 96x96mm/3.78x3.78"
- Degree of protection: IP65 on front; IP20 on terminals
- Predisposed for IEC/EN/BS 61850 signal supervision using expansion or external module.

Reference standards

Compliant with standards: Italian CEI 0-16; IEC/EN/BS 60255-27, IEC/EN/BS 61010-1, IEC/EN/BS 61000-6-2, IEC/EN/BS 61000-6-3.

Remote control and monitoring GSM modem via SMS

Compliant with Italian CEI 0-16 Standard, paragraph 8.8.6.5 and annex M, resolution 421/2014 of the ARERA

EXCGSM01

Order code	Description	Qty per pkg	Wt
		n°	[kg]

GSM Modem (modular - 4U).
IP69K outdoor aerial with 2.5m cable.
RJ45-USB programming cable (included).

EXCGSM01	100...240VAC, 1 digital input, 1 analog input (0...10V, 0...20mA, NTC), 1 relay output, SMS send/receive for remote control and alarm signals	1	0.340
-----------------	---	---	-------

Use with CEI 0-16

The CEI 0-16 standard in paragraph 8.8.6.5 and in attachment M prescribes that the electricity production plants powered by wind or solar photovoltaic sources with power greater than or equal to 100kW, connected or to be connected to medium voltage grids, are equipped with GSM modem.
Thanks to this modem it is possible to manage the disconnection of the generation through the messages sent by the energy distributor.

AERIAL

- Quad band 850/900/1800/1900MHz
- Degree of protection: outdoor IP69K
- 2.5m cable
- Fixing via M10 hole:
 - with adhesive seal
 - with threaded pin and nut.

General characteristics

With EXCGSM01 it is possible to remotely operate a relay output and obtain information on the system by sending programmable SMS.

Using the configuration software (downloaded for free from www.LovatoElectric.com) the user can control the relay output and both the digital and analog inputs.

The logic is based on events (for example, the activation of the digital input or the arrival of an SMS with specific text), to which the user can decide specific actions (reply either by SMS or voice message, or by switching the relay output).

Operational characteristics

- Auxiliary supply voltage: 100...240VAC
- 1 digital output 3A 250VAC
- 1 self-supplied digital input
- 1 analog input 0...10V, 0...20mA, NTC
- Housing for 3V and 1.8V SIM card
- SIM PIN management
- Temperature sensor
- Update time, sunrise and sunset via GSM network
- Position update via GSM
- Certified according to FCC rules, part 15B
- Housing: modular (4 modules)
- Mounting on 35mm DIN rail
- Operating temperature: -20...+60°C
- Degree of protection: IP40 on front; IP20 on terminals.

Reference standards

Compliant with electrical safety standards: EN/BS 62368, EN/BS 62311.

Compliant with Italian standard CEI 0-21 For low voltage

EXM1013	Opto-isolated Ethernet interface
EXM1018	IEC/EN/BS 61850 interface
Inputs and outputs.	
EXM1001	2 digital opto-isolated inputs and 2 relay outputs 5A 250VAC

General Characteristics

PMVF52 interface protection system (IP) unit has been developed according to the Italian CEI 0-21 standard prescriptions. Each is used when a local solar generating system is connected in parallel with the low-voltage electric utility. The controls refer to limits of voltage and frequency monitoring.

In the case when either the voltage or the frequency are out of admissible limits, PMVF52 must step in by de-energising a relay output so that the interface switch (IS) trips.

PMVF52 is certified for use in single and three phase systems, where it is required in presence of storage systems connected in parallel to the distribution network and to the photovoltaic inverter on the AC side (presence of multiple energy generators simultaneously or exceeding the threshold of 11.08kW overall).

PMVF52 is equipped with 5 inputs having the following functions:

- IS status feedback
- External signal for frequency selection (communication network malfunction)
- Local control for frequency selection
- Remote tripping (forced IS opening, independent of voltage and frequency values)
- 5th programmable input.

Also, there are three relay outputs for:

- IS opening and closing
- Standby device opening (programmable: retentive normally energised, retentive normally de-energised or adjustable pulse)
- 3rd programmable output.

The standby device control is compulsory in installations with more than 20kW and consists of a signal, with a 0.5s delay respect to the IS opening command, transmitted only if the IS failed and did not complete the disconnection.

Operational characteristics

- Auxiliary supply voltage:
24...240VAC/24...240VDC
- Voltage inputs:
 - 400VAC (three-phase connection)
 - 230VAC (single-phase connection)
- Relay outputs
OUT1: 8A 250VAC, 8A 30VDC
OUT2: 5A 250VAC, 5A 30VDC
OUT3: 2A 250VAC, 2A 30VDC
- Parameter configuration and remote control (only with communication expansion module) with software **Synergy** and **Xpress**
- Housing: Flush mount 96x96mm/3.78x3.78"
- IEC degree of protection: IP65 on front; IP20 on terminals
- Predisposed for IEC/EN/BS 61850 signal supervision using expansion or external module.

Reference standards

Compliant with standards: Italian CEI 0-21, IEC/EN/BS 60255-27, IEC/EN/BS 61010-1, IEC/EN/BS 61000-6-2, IEC/EN/BS 61000-6-3.

Backup power supply for interface protection system units

PMVFUPS02

Order code	Description	Qty per pkg	Wt
Backup power supply for interface protection system units PMVF...			
PMVFUPS02	Input 230VAC. Output 230VAC with stored energy 645Ws and power 650VA	1	0.500

Compatibility:

- Compatible with contactors (IS or backup function) with standard AC or electronic coil.
- Compatible with undervoltage trip releases (IS or backup function) of moulded case circuit breakers.

General characteristics

CEI 0-21 and CEI 0-16 standards require an auxiliary power supply to feed the interface protection (IP), the interface switch (IS) and the backup switch for at least 5 seconds in the event of a power failure. PMVFUPS02 guarantees the necessary energy by accumulating it in capacitors, thus avoiding the use of batteries that require maintenance.

Operational characteristics

- Power supply: 230VAC, 50Hz
- Output voltage: 230VAC, 50Hz
- Output power: 650VA
- Accumulated energy: 645Ws
- Accumulation time: 60s
- 9U modular housing
- Operating temperature: -5...+ 50°C
- Degree of protection IP20.

Reference standards

Compliant with standards: IEC/EN/BS 61010-1.

PMVF90

Slovakia - Czech Republic:
systems requiring 3 maximum voltage thresholds.

General characteristics

PMVF... interface protection system (IP) units have been developed in order to be used when a local generating system is connected in parallel with the utility distribution grid. The controls refer to limits of voltage and frequency monitoring. In the case when either the voltage or the frequency are out of admissible limits, the PI must step in by de-energising a relay output so that the interface device (IS) trips.

PMVF81 and PMVF90 are equipped with 5 inputs having the following functions:

- IS status feedback
- R.O.C.O.F or Vector shift delay
- Disabling signal
- Remote tripping (forced IS opening, independent of voltage and frequency values)
- Programmable

Also, there are 3 relay outputs for:

- IS opening and closing
- Backup device opening: PMVF81 is able to manage as backup both a contactor or a breaker (pulse or continuous type)
- Programmable (default: global alarm).

The backup device consists of a signal contemporary or delayed respect to the IS opening command, transmitted only if the IS failed and did not complete the disconnection.

Operational characteristics

- Auxiliary supply voltage: 24...240VAC/24...240VDC
- Voltage inputs range: 50-500000VAC
- Relay outputs:
 - OUT1: 8A 250VAC, 8A 30VDC
 - OUT2: 5A 250VAC, 5A 30VDC
 - OUT3: 2A 250VAC, 2A 30VDC
- Password for parameters protection
- 5 digital inputs
- Programmable rated voltage, programmable voltage and frequency thresholds and delays
- Support of EXM series communications modules (USB, RS232, RS485, Ethernet)
- Event log (128 events with time reference):
 - Interface protection trip events
 - Password interaction events
 - Commands execution
 - System events
- Parameter configuration and remote control (only with communication expansion module) with software **Xpress** and **Synergy**
- Housing: modular, 4 modules
- Degree of protection: IP40 on front; IP20 on terminals
- Predisposed for IEC/EN 61850 signal supervision using expansion or external module ①.

Reference standards

Compliant with standards: VDE-AR-N 4105, VDEAR-N 4110, VDE-AR-N 4120 and IEC/EN 61010-1 only PMVF81. PMVF90 and PMVF81 IEC/EN 61000-6-2, IEC/EN 61000-6-4 application guides.

Compliant with standards ENA G59-3/G99, SHAMS DUBAI - DRRG STANDARDS (DEWA), SEC (Saudi Electricity Company)

PMVF60
PMVF70

EXM10...

PMVFUPS02

Order code	Description
EXPANSION MODULES FOR PMVF60 AND PMVF70 Communication ports.	
EXM1010	Opto-isolated USB interface
EXM1011	Opto-isolated RS232 interface
EXM1012	Opto-isolated RS485 interface
EXM1013	Opto-isolated Ethernet interface
EXM1018	IEC/EN/BS 61850 interface
Inputs and outputs.	
EXM1001	2 digital opto-isolated inputs and 2 relay outputs 5A 250VAC

Order code	Description
Accessories for PMVF60 and PMVF70	
PMVFUPS02	Backup power supply for interface protection system units PMVF..., 230VAC

❶ IEC/EN/BS 61850 protocol

The EXP1018 module will be made available only when the competent authorities have established the exact terms of the supervision and control of the specific commands.

❷ For details see page 11.

General characteristics

PMVF... Interface protection system (IP) units have been developed in order to be used when a local generating system is connected in parallel with the utility distribution grid. The controls refer to limits of voltage and frequency monitoring.

In the case when either the voltage or the frequency are out of admissible limits, the PI must step in by de-energising a relay output so that the interface device (IS) trips.

PMVF... is equipped with 4 inputs having the following functions:

- IS status feedback
- R.O.C.O.F./Vector shift delay or external signal for frequency selection (communication network malfunction)
- Disabling signal
- Remote tripping (forced IS opening, independent of voltage and frequency values).

Also, there are two relay outputs for:

- IS opening and closing
- Standby device opening (programmable: retentive normally energised, retentive normally de-energised or adjustable pulse).

The backup device consists of a signal contemporary or delayed respect to the IS opening command, transmitted only if the IS failed and did not complete the disconnection. PMVF... also has two additional relay outputs (EXM1001) to configure as:

- Programmable alarm
- Autonomous signalling in case of phase power unbalance (LSP), only if three CTs are also installed.

Operational characteristics

- Auxiliary supply voltage: 100...240VAC/110...250VDC
- Voltage inputs: max 400VAC
- Relay outputs:
 - OUT1: 5A 250VAC AC1 / 5A 30VDC
 - OUT2: 5A 250VAC AC1 / 5A 30VDC
- Password for parameters protection
- 4 digital inputs
- Current inputs (optional): use via CTs with selectable /5A or /1A secondary
- Support of EXM series communications ports (USB, RS232, RS485, Ethernet) see section 31
- Parameter configuration and remote control (only with communication expansion module) with software **Synergy** and **Xpress**
- Housing modular (6 modules)
- Mounting on 35mm DIN rail (IEC/EN/BS 60715) or screw fixing via pull out tabs
- Degree of protection: IP40 on front; IP20 on terminals.

Reference standards

Compliant with standards: DEWA DRRG (PMVF60); SEC (PMVF60); ENA G59-3/G99 (PMVF70); VDE-AR-N 4105, VDE V 0126-1-1 (PMVF80); IEC/EN/BS 60255-27; IEC/EN/BS 61010-1, IEC/EN/BS 61000-6-2, IEC/EN/BS 61000-6-4.

P1MB4PC63	C	63	10	4	3	0.460

General characteristics

These devices are used to protect against short circuits and overloads of wiring installations and loads in panel boards, office buildings, stores and similar applications.

Their purpose is circuit protection, circuit isolation and load operation controls. They have characteristics of instantaneous trip defined as follows:

- C-curve: instantaneous trip 5...10 times In for inductive loads (mixed loads, resistive and inductive with low inrush current)

Main features include:

- IEC rated current In: 1...63A
- Pole width: 17.5mm / 0.69"
- Contact status with flag indicator
- Trip characteristic: curve type B, C and D
- Auxiliary contacts and trip releases mounted on left side
- Fixing on 35mm DIN rail (IEC/EN/BS 60715).

Operational characteristics

- Dissipation per pole: 3...13W
- IEC rated insulation voltage Ui: 440V
- IEC rated impulse voltage Uimp: 4kV
- IEC rated operational voltage Ue: 230/400VAC
- UL 1077 rated operational voltage: 480VAC
- Short circuit breaking capacity: IEC/EN/BS 10kA - UL 7.5kA 480V.

Certifications and compliance

Certifications obtained: cURus (E369585); EAC; TÜV-Rheinland. Compliant with standards: IEC/EN/BS 60898-1, IEC/EN/BS 60947-2, UL 1077, CSA C22.2 n°235.

Miniature circuit breakers 80...125A

4P - 10kA

General characteristics

These RCCBs are intended for the protection of people against indirect contact (electric shock) and of installations against fire hazards due to a persistent earth/ground fault current.

They also protect against short circuit and overcurrent.

From a practical point of view, they integrate both functions of MCB and of RCCB.

Its main features are:

- IEC rated current In: 6...40A
- Version: 1P+N
- Contact status with flag indicator
- Double control lever to distinguish the residual current tripping from short circuit or overcurrent tripping
- Trip characteristic: curve type C
- Fixing on 35mm DIN rail (IEC/EN/BS 60715).

Operational characteristics

- Dissipation per pole: 3...13W
- Rated insulation voltage Ui: 400V
- Rated impulse voltage Uimp: 4kV
- Operating frequency: 50/60Hz
- Rated operational voltage Ue: 230VAC
- Rated residual operating voltage IΔn: 30mA or 300mA
- IEC short-circuit breaking capacity Icn: 10kA

Certifications and compliance

Certifications obtained: TÜV Rheinland, EAC. Compliant with standards: IEC/EN/BS 61009-1, IEC/EN/BS 61009-2-1.
